SUMMARY

Senior Software Engineer with 5+ years of experience building scalable, distributed, and high-availability applications in healthcare and enterprise domains. Skilled in full-stack development (Angular, React, Java, .NET), cloud infrastructure (AWS, Azure), CI/CD automation, and mentoring teams. Proven ability to deliver robust solutions, improve system performance, and apply AI/ML technologies to enhance product functionality.

SKILLS

Programming	Angular (16+), React.js, TypeScript, JavaScript, HTML, CSS/SCSS, Node.js, Java (Spring Boot), C#, .NET, Python, Golang, REST APIs, GraphQL
Cloud & DevOps	AWS (EKS, S3, Lambda, DynamoDB, SQS, CloudWatch), Azure, Terraform, Octopus Deploy, Kubernetes, Docker, CI/CD pipelines
Databases	PostgreSQL, MySQL, Oracle, MongoDB
Testing & Tools	Cypress, Jest, JUnit, Mockito, NgRx, TDD/BDD, Agile/Scrum
Other	Software Design, Distributed Systems, High Availability Applications, Automation, Design Reviews, Mentoring, AI/LLM Integration, System Performance Optimization

WORK EXPERIENCE

Sr. Software Engineer | HCA Healthcare | Tampa, FL

May 2023 - May 2024

- Led design and development of HIPAA-compliant patient onboarding applications using Angular, TypeScript, Java Spring Boot, and REST APIs, improving system reliability by 30%.
- Mentored junior engineers, conducted code reviews, and guided team in adhering to engineering best practices and CI/CD standards.
- Implemented Cypress-based end-to-end tests and automated CI/CD pipelines, achieving 92% test coverage and reducing production defects by 35%.
- Collaborated with cross-functional teams to integrate AI/ML-based recommendation engines to enhance patient workflows.
- Supported production deployments and performed post-release issue resolution, maintaining 99.9% uptime for critical healthcare applications.

Software Engineer | Amazon | Telangana, India

June 2021 - July 2022

- Developed event-driven distributed systems processing 10M+ daily transactions using Node.js, AWS Lambda, Kafka, and DynamoDB.
- Integrated AWS CloudWatch and SQS for monitoring, alerting, and automated remediation, reducing incident response time by 60%.
- Automated cloud infrastructure using Terraform, reducing manual deployment effort by 70% and improving system scalability.
- Tuned APIs and services to reduce latency by 50% under high-load scenarios, ensuring reliable system performance.
- Participated in Agile sprint planning, backlog grooming, and cross-team technical solution discussions.

Software Engineer | Wipro | Telangana, India

Aug 2019 - June 2021

- Built enterprise microservices using Spring Boot and Angular, translating UI/UX designs into robust, high-quality code.
- Migrated BI systems to Snowflake, improving query performance by 45% and reducing operational costs by 20%.
- Developed real-time streaming pipelines using Kafka for distributed reporting and analytics systems.
- Collaborated on design reviews, technical standards enforcement, and system architecture improvements across multiple projects.

EDUCATION

University of South Florida - MS in Business Analytics and Information Systems

GCET - Bachelor of Technology in Computer Science

PROJECTS

- **Real-Time IoT Monitoring Pipeline:**
 - Architected scalable distributed pipeline using Kafka, Spark Streaming, Azure Data Lake, and MongoDB for 100K+ IoT devices; achieved 5–10s latency, 99% anomaly detection, and reduced downtime by 50%.
- **Automation & Cloud Deployment:**
 - Implemented CI/CD automation for microservices on AWS EKS and Kubernetes; streamlined deployments across multiple environments, cutting release time by 40%.
